

MACHIAS ELEMENTARY SCHOOL

NATURE PATH

- The Intent of the Nature Path concept is to connect the school to the natural surroundings and woods through organic interior spaces, exterior views, and useful and beautiful outdoor areas.
- A free-flowing interior space connects the various neighborhoods of the school in a natural or organic way.
- The key communal portions of the school such as the library, the Inter-disciplinary room, and the special resource rooms are all part of the curving interior space that knits the school together.
- The exterior of the building is composed of simple buildings that make reference to the rural history of the place that are connected by the curving, organic communal spaces of the school.
